| | KASW53 - Fire Rated | 2200-3150 | 700x1200 | Cast Aluminium | N | Spring Loaded |

'W'= 700mm wide (standard width is 500mm wide)

# MEASURING YOUR SPACE

Find a suitable space for your attic ladder and ensure that you will be able to easily access your attic. There are a number of key measurements you need to consider for your ladder position;

Landing
When the ladder is fully extended to the floor, the feet will rest approximately 400-500mm past the frame. You will also need to allow room for yourself to comfortably access the ladder, especially when holdings your belongings for storage.

Projection
As you extend the ladder sections to the floor the middle section will project beyond the frame by as much as 600mm (depending on the ladder model).
